

SF Industrial Washing Solutions

Efficient cleaning systems for the food industry

High Hygiene
Powerful Cleaning

Low Maintenance Costs
Easy to Use

Industrial washing machine reduces labour costs by 80%

With a focus on hygiene and efficiency, customer tests have shown that SF's range of industrial washers can achieve incredible cost savings by using less water, energy and man-hours.

From entry level washers to custom built solutions, all of our washing systems are low-energy, efficient, reliable and safe. Regardless of the pollution, we can provide a solution that cleans utensils, crates, pallets or bins.

UN-2000 Crate Washer

Saving on labour requirements

Saving on running hours

Water savings

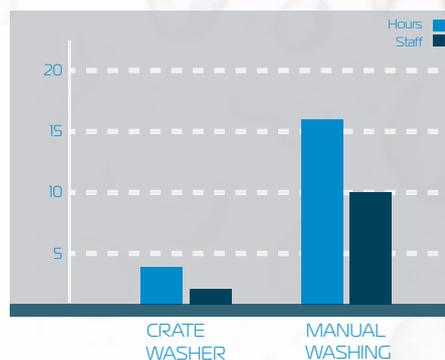

Power savings

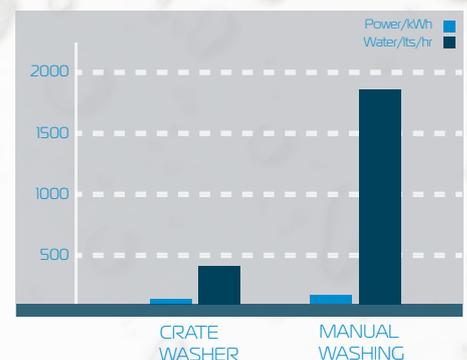

Case Study

Prior to the crate washer, our customer washed 1600 crates per 16 hour day. When the machine was installed, they were able to wash 400 crates per hour with a more consistent wash quality. In labour or man-hours, this ensured they only needed 4 hours with two employees instead of 16 hours with ten employees

Time Saving

Energy Saving

Crate Washers

Our fast and efficient crate washers ensure your crates are cleaned to exceptionally high hygiene standards and are back in your manufacturing area quickly to meet production demands. From small to large crates, light or heavily soiled we have a crate washing solution to meet your requirements. We can offer everything from a single operator, standalone manual crate washers to fully integrated the washing solutions.

Bin Washers

Our bin/container washers are tailored to your individual requirements, such as, which type of container you use and the quantity you want to wash. Your business may need a washer which can accommodate multiple sized bins/containers, high throughputs, light or heavy washing demands, manually operated or fully integrated, we work with you to achieve the best solution for production demands.

Trolley Washers

It doesn't matter what type of trolley you use, the advanced cleaning technique of our trolley washers means we can clean all types and sizes of trolley, quickly and efficiently, due to the moving wash frame fitted with nozzles on all four sides. Washing time and pressure is then adjusted to match the required cleaning demand.

Logistic Washing Systems

An industrial washing machine is often included within the logistic system, therefore we can provide fully automated solutions that can wash, de-palletize or palletize, stack or de-stack, feed and dispose with no manpower needed. The speed of the logistics system is linked to the capacity of your washing machine making the mechanization and automation of your production complete.
